

Take the Unknown Risk Out of APIs

- ✓ Validate Credentials
- ✓ Scan at Scale
- ✓ Remove Vulnerabilities
- ✓ Integrated Workflow
- ✓ Low False Positives

Validate Credentials

Ensure API access is secure and delivered only to authorized processes. Reducing spoofing risk.

Scan at Scale

Remove the barriers of scalability. Veracode DAST scales to the most complex applications.

Remove Vulnerabilities

Take the risk out of third-party APIs by scanning them for unknown vulnerabilities.

Integrated Workflow

Avoid disruption and additional complexity by integrating API security into your existing workflow.

Low False Positives

Increase productivity and quality with reliable, real-time results. Giving you the information to quickly remove risk.

Veracode DAST is a dynamic application security testing solution that helps organizations integrate API vulnerability scanning directly into their development pipeline to strengthen software against attack.

Veracode's Software Security Platform helps find and fix flaws at every stage of the modern software development lifecycle. Trusted by security teams, developers, and business leaders, Veracode helps organizations secure applications from source to speed at scale.
